

Disposable Cover Overalls CLK2 NCT800J

Colours available:

Description DuPont™ Tyvek® 800 J, model CHA5

Fabric Properties Robust yet lightweight (<300g). Self-adhesive zipper flap. Self-adhesive chin flap for tight seal of suit to mask. Elasticated face, wrists and ankles as well as glued-in waist elastic. Thumb loops to prevent sleeves from riding up.

Physical Properties Tyvek® 800 garments provide an ideal balance of protection, durability and comfort. They benefit from the use of a specific 'impervious technology' to achieve an effective barrier against many low-concentrated water-based inorganic chemicals (even under pressure) and small-sized hazardous particulates, as well as oil repellency. The fabric is antistatically treated. Silicon non-added. Applications for Tyvek® 800 J garments include those in very humid applications requiring chemical, liquid protection and/or oil repellency. Typical activities include industrial cleaning, work at petrochemical installations, in sewers and maintenance operations.

Uses Chemical protective clothing

Standards

Sizes M - 3XL

Precautions Garments must be correctly and continuously grounded via electrostatic dissipative shoes, floor and/or grounding cable
