Disposable Cover Overalls CLK2 NCT8555

Colours available:

 Grey

Description DuPont™ Tychem® F2, Model CHZ5 Hooded Coverall

Fabric Properties Elasticated face, wrists, waist and ankles for an optimal fit, including use of a comfort elastic at the wrists and face to avoid skin irritation. Self-adhesive flap for tight seal of suit to face-masks.

Physical Properties Tychem® F2 fabric combines the chemical barrier and performance of Tychem® F with an even higher mechanical resistance. It comprises Tychem® F laminated to an additional high strength nonwoven. Garments made from Tychem® F2 fabric offer excellent chemical permeation protection to an extensive range of chemicals, helping to protect personnel against numerous toxic industrial organic chemicals, highly concentrated inorganic chemicals (even under pressure), particulates, biohazards and certain chemical warfare agents. Despite the high level of protection, the fabric is surprisingly lightweight (<850g per garment), robust and comfortable too. Tychem® F2 is used for splash or pressurised splash protection in a variety of demanding industrial environments, including pulp and paper manufacturing, shutdowns, chemical processing and pharmaceutical manufacturing. It can be used across a broad range of applications, from chemical spill clean-up, emergency response, to military and petrochemical applications.

Uses Chemical protective clothing

Standards

Sizes M - 3XL

Precautions Garments must be correctly and continuously grounded via electrostatic dissipative shoes, floor and/or grounding cable
