

Load Arrest Blocks HSL1 G-GUARD 1000

7m, 9m, 10m

Description	G-Guard 1000kg is a retractable tensioned safety line for protection of machinery, high value and sensitive loads
Physical Properties	<p>Cable lengths: 7m, 9m, 10m. Maximum working load: 1000kg. Stopping Distance (approx.): min: 0.3m; max: 1.0m</p> <p>Fall protection brake can be activated by quickly extracting the safety line from within the arrester housing. This happens when a fall occurs. Brake includes a shock-absorbing element to minimise forces encountered when stopping a fall.</p>
Uses	The G-Guard range of load fall arresters are suitable for protecting both static and moving loads in a wide variety of applications. Where directional movement, usually gravitational, above a speed must be protected against, the G-Guard range of load arresters offer an 'off the shelf' solution for stopping moving loads.
Precautions	Safe working load 1000kg
Standard	CE 0353. 2006/42/EC
